A clapper valve is a type of check valve that allows fluid to flow in only one direction. It is also known as a clack valve, one-way valve, or non-return valve. The clapper is the interface between the air and the water within a dry pipe valve, and its purpose is to remain closed when air pressure is sufficient in the system, and open when the air pressure falls. The clapper hangs from a hinge, clapper shaft, or pin mounted to the underside of the bonnet³. In the Siamese fire appliance, a clapper valve is used to allow only one hose to be connected instead of two.
