According to our (Global Info Research) latest study, the global Clarifying Centrifuge market size was valued at US\$ 94.6 million in 2024 and is forecast to a readjusted size of USD 119 million by 2031 with a CAGR of 3.3% during review period.

A clarifying centrifuge is a mechanical device that uses the principle of centrifugal force to separate liquid and solid particles. In a high-speed rotating centrifuge, the mixed liquid is subjected to the centrifugal force, which separates the solid particles from the liquid. The solid particles are deposited at the bottom of the centrifuge under the action of centrifugal force, while the liquid flows upward, thus achieving the purpose of solid-liquid separation.
