The global Clarity Detector market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Clarity Detector is a light tester developed for various regulations of the inspection device in the clarity inspection rules and judgment standards. It is suitable for the clarity test of various injections, large infusions and bottled liquid medicines. The clarity tester itself comes with a simple illuminance meter, which can adjust the illuminance of the light source at any time, avoiding the disadvantages that the illuminance of the light source cannot be measured for a long time, and the use of fluorescent tubes for a long time, the brightness weakening and other factors affect the measurement results.
