According to our (Global Info Research) latest study, the global Class K Audio Power Amplifier Chip market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Class K audio power amplifier chip is a high-efficiency audio power amplifier chip, also known as Class D audio power amplifier chip. Compared with traditional Class A and Class B audio power amplifier chips, Class K audio power amplifier chips have higher power efficiency and lower power loss. The working principle of the Class K audio power amplifier chip is to convert the audio signal into a pulse width modulation (PWM) signal, and then reconstruct it into an analog audio signal through a filter. This pulse width modulation technology enables the power amplifier chip to work with lower power loss when outputting high-power audio signals, thereby improving power efficiency. The advantages of Class K audio power amplifier chips include: 1. High power efficiency: Compared with traditional Class A and Class B power amplifier chips, Class K power amplifier chips have higher power efficiency and can more effectively convert the power of the input power supply into output audio power. 2. Low power loss: Due to the use of PWM modulation technology, Class K power amplifier chips can work with lower power loss when outputting high-power audio signals, reducing energy waste. 3. Small size and light weight: The high power efficiency and low power loss of Class K power amplifier chips make the entire power amplifier circuit design smaller and lighter, suitable for small audio equipment and portable audio products. 4. Low heat generation: Due to the low power loss, the class K power amplifier chip generates relatively little heat during operation, which reduces the requirements for heat dissipation design. Class K audio power amplifier chips are widely used in audio equipment and systems, such as home theater systems, car audio systems, stage audio equipment, etc., to provide high-

efficiency, high-quality audio amplification.
