## Abstracts

According to our (Global Info Research) latest study, the global CLBO Crystal market size was valued at US\$ 3.31 million in 2025 and is forecast to a readjusted size of US\$ 6.98 million by 2032 with a CAGR of 6.3% during review period.

CLBO Crystal (Cesium Lithium Borate, CsLiB6O10) is a nonlinear optical crystal used for ultraviolet and deep-ultraviolet frequency conversion. It is valued for its short cut-off wavelength, wide transparency range, relatively high damage threshold, large angular tolerance, and small walk-off angle, making it especially suitable for generating the fourth and fifth harmonics of Nd:YAG lasers and other high-power UV laser applications.

For CLBO crystal (CsLiB6O10), the core stoichiometric raw materials are cesium carbonate (Cs<sub>2</sub>CO<sub>3</sub>), lithium carbonate (Li<sub>2</sub>CO<sub>3</sub>), and boron oxide (B<sub>2</sub>O<sub>3</sub>). In actual crystal-growth practice, especially in TSSG or flux growth, molybdenum trioxide (MoO<sub>3</sub>) is also a very important growth flux and process material, but it is not part of the final CLBO stoichiometric composition. Downstream, CLBO mainly enters UV/DUV frequency-conversion modules and then serves deep-UV solid-state lasers, semiconductor inspection, precision micromachining/PCB drilling, spectroscopy, UV LiDAR, and some biomedical or specialized imaging systems.

In 2025, global sales of CLBO Crystal reached approximately 1,082 K Pcs, with an average global market price of around US\$ 2,973/Pcs. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 50% to 60%.

The CLBO crystal market is fundamentally a small but highly technical niche within deep-UV nonlinear optical materials, rather than a broad-volume optical-material market.

Public supplier materials consistently position CLBO as a specialty crystal for UV/DUV harmonic generation and high-end laser-source chains, indicating a market characterized by high value-add, low volume, and strong application specificity.

The core supplier landscape within the CLBO crystal market is highly concentrated, dominated primarily by a select few specialized optical crystal manufacturers. OXIDE Corporation, SOSHO CHOKO, CASTECH, EKSMA Optics, and Cryslaser are the most active and prominent commercial players in the market.

The outlook for CLBO is broadly positive, but growth is more likely to come from deeper penetration into high-end DUV applications rather than from broad commoditized volume expansion. CLBO's commercial value is tied mainly to continuing upgrades in semiconductor equipment, precision micromachining, and specialized UV systems; therefore, future competition is likely to focus on product quality, application qualification, and customer adoption rather than on mass standardization.
