Abstracts

According to our (Global Info Research) latest study, the global Clean Agent Fire Extinguishers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A clean agent is any type of fire extinguishing agent that is electrically non-conductive, volatile, or gaseous, and that does not leave a residue upon evaporation. Clean agent fire suppression systems make use of an inert gas or chemical that is stored in a container and discharged when a fire is detected. The Clean Agent Fire Suppression Systems offered by Monroe Extinguishers use HFC-236fa, a colorless, odorless, electrically non-conductive ‘‘clean’’ agent which discharges as a liquid and flashes to a gas, providing an effective firefighting range.

These systems use noble gases (helium, neon, argon, nitrogen, and small amounts of carbon dioxide) to reduce the amount of oxygen available in the air for combustion and to absorb some of the heat. Fires are sustained by the combination of oxygen, heat and fuel. Once oxygen or heat has been removed from the chemical reaction, the fire is suppressed. Previous Clean Agent Systems used halocarbon agents or pure carbon dioxide to achieve this extinguishing effect, but are no longer in use because of their negative impacts on human health and the environment.

The Global Info Research report includes an overview of the development of the Clean Agent Fire Extinguishers industry chain, the market status of Commercial Usage (Class A Fire, Class B Fire), Residential Usage (Class A Fire, Class B Fire), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Clean Agent Fire
