## Abstracts

According to our (Global Info Research) latest study, the global Clean Ammonia Fuel market size was valued at US\$ 212 million in 2025 and is forecast to a readjusted size of US\$ 373 million by 2032 with a CAGR of 8.0% during review period.

In 2025, global Clean Ammonia Fuel approximately 180,316 tons, with an average global market price of around US\$ 1145 per ton. Gross margin is about 47%. The cost is 607 usd. The Production is about 200,000 tons. Clean Ammonia Fuel is a clean energy fuel based on ammonia (NH<sub>3</sub>) with significantly lower carbon emissions than traditional fossil fuels. Ammonia can be directly combusted or converted into electricity in fuel cells, and it is suitable for power generation, marine propulsion, and industrial heat applications. Low-carbon ammonia is typically produced via green hydrogen (water electrolysis) combined with nitrogen from the air, achieving a low-carbon production process. It is a key fuel in the global transition to low-carbon energy and the hydrogen economy.

The future development of Clean Ammonia Fuel will focus on green hydrogen production, combustion efficiency optimization, safe storage and transport, and ammonia energy application systems. With carbon neutrality policies and the promotion of zero-carbon ships and distributed energy systems, the ammonia fuel value chain will become more integrated, including production, storage, transport, and combustion technologies. Technological innovation will improve combustion efficiency, reduce nitrogen oxide emissions, and promote diversified applications such as fuel cells and internal combustion engines.
