Abstracts

Clean label is a broad term that is used in a B2B environment, between ingredient suppliers and food producers to describe characteristics of ingredients, but with less precision than other terms such as “organic” or “non-GM”. Emulsifiers compete with physical emulsification techniques in various food matrices. Homogenization, ultrasonication, colloidal mixing and other physical methods may help to create emulsions of varying degrees of stability. These can be used in isolation or in combination with the synthetic/natural emulsifiers. Just the physical methods themselves could lead to a “clean label” product. A significant advantage that emulsification has over other characteristics such as flavor, sweetness or color – ingredients being indispensable for these functions.

This report studies the global Clean Label Emulsifier production, demand, key manufacturers, and key regions.
