A cleanroom transport robot is a robot specifically designed to transport items and equipment in semiconductor manufacturing and other industries that require a highly clean environment. They are used to transport critical materials from one clean room area to another to avoid external contamination into the process flow.

Cleanroom transport robots are typically autonomous mobile platforms that use various sensors and navigation techniques to avoid collisions and track their position. They are also often equipped with electronic monitoring systems to ensure they do not release particles or other contaminants during transport.

Clean room transport robots can effectively improve production efficiency and quality, and reduce pollution and waste in the process. They also increase job safety by reducing employee involvement and risks during transport.
