According to our (Global Info Research) latest study, the global Cleaning of Building Ventilation Duct Systems market size was valued at US\$ 633 million in 2025 and is forecast to a readjusted size of US\$ 906 million by 2032 with a CAGR of 5.2% during review period.

Cleaning of Building Ventilation Duct Systems are a professional service designed to clean and maintain the ventilation systems within buildings, including air conditioning systems, air ducts, and ventilation pipes. This service uses high-pressure air, brushes, and vacuum cleaners to remove dust, dirt, mold, grease, and other contaminants from the ducts, ensuring smooth airflow, improving indoor air quality, and enhancing the energy efficiency of HVAC systems.

This cleaning service is widely used in commercial buildings, office buildings, shopping malls, hotels, hospitals, and other public places, and is particularly important in locations requiring high-efficiency air quality and compliance with health standards. Regular ventilation duct cleaning not only helps reduce the spread of allergens, bacteria, and viruses, but also reduces energy consumption, improves the efficiency of air conditioning systems, and extends equipment lifespan.

With increasing global focus on indoor air quality (IAQ) and stricter requirements for building energy conservation and environmental protection, the demand for commercial ventilation duct cleaning services is constantly growing. Market attention for this type of service stems not only from health and safety standards but also from regulatory and environmental policies. In the future, as more buildings adopt high-efficiency air conditioning systems and green building designs, ventilation duct cleaning services will

become an important maintenance item, with a promising market outlook.
