According to our (Global Info Research) latest study, the global Cleaning Roller market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

A cleaning roller is a rotating roller designed for the removal of dust, dirt, and other foreign particles from board or sheet products. Products with a flat or sheet-like form, such as circuit boards or paper, are often transported on rollers. The use of a cleaning roller allows for the inline removal of foreign particles without interrupting the product's movement along the conveyor. When compared to non-contact dust removal methods, cleaning rollers excel in their ability to eliminate even firmly adhered foreign matter.
