Abstracts

Climate Ceilings, also known as radiant ceilings, can both be used for heating and cooling. Creating the perfect indoor climate all over the building, both in cold north sides and warm south sides at the same time, can be a challenge. Especially spring and fall with a lot of sun and cold winds can be a factor that changes the indoor climate of the building. Ceiling panels are heated in one of three ways: water pipes, electric or air flows embedded in the panel. Of these three, electric circuits and water pipes are the most used solution.

This report studies the global Climate Ceilings production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Climate Ceilings, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year. This report explores demand trends and competition, as well as details the characteristics of Climate Ceilings that contribute to its increasing demand across many markets.

The global Climate Ceilings market size is expected to reach \$ 1335.3 million by 2029, rising at a market growth of 7.8% CAGR during the forecast period (2023-2029).

Global key players of climate ceilings include Zehnder Group, Uponor, SAS International, Swegon, Interalu NV, etc. The top five players hold a share over 30%. Europe is the largest producer, has a share about 85%, followed by North America, with share 11%.
