A climbing safety chain is a personal protective equipment designed for rock climbing and aerial work. It is usually composed of a series of high-strength stitched links and is made of wear-resistant and high-strength tensile materials such as nylon or Dyneema. It is mainly used to provide climbers with a reliable self-protection connection when establishing anchor points, converting protection systems, clearing routes or hanging. Unlike traditional daisy chains, each stitched ring of a climbing safety chain usually has an independent load-bearing capacity and can be flexibly adjusted in length according to actual needs to improve the safety and convenience of operation. This equipment emphasizes stability under static loads and impact forces, and is widely used in traditional climbing, multi-pitch climbing, big wall climbing, and aerial rescue. With the development of rock climbing activities, the demand for lightweight, strength standards and versatility of safety chains has also continued to increase, prompting major equipment manufacturers to continuously improve product design and performance.
