Abstracts

According to our (Global Info Research) latest study, the global Clinical Trials market size was valued at USD 48020 million in 2023 and is forecast to a readjusted size of USD 63030 million by 2030 with a CAGR of 4.0% during review period.

Clinical trials are experiments or observations done in clinical research. Such prospective biomedical or behavioral research studies on human participants are designed to answer specific questions about biomedical or behavioral interventions, including new treatments (such as novel vaccines, drugs, dietary choices, dietary supplements, and medical devices) and known interventions that warrant further study and comparison. Clinical trials generate data on safety and efficacy. They are conducted only after they have received health authority/ethics committee approval in the country where approval of the therapy is sought. These authorities are responsible for vetting the risk/benefit ratio of the trial – their approval does not mean that the therapy is 'safe' or effective, only that the trial may be conducted.

The industry's leading producers are Parexel, PRA Health and LabCorp (Covance), which accounted for 4.94%, 7.25% and 11.81% of revenue in 2019, respectively. By region, North America has the highest share of income, at more than 39 percent.
