According to our (Global Info Research) latest study, the global Closed Aquaculture System market size was valued at US\$ 1873 million in 2025 and is forecast to a readjusted size of US\$ 2923 million by 2032 with a CAGR of 6.6% during review period.

Closed Aquaculture System is an intensive farming model that completely isolates the farming environment from the external natural water body through physical barriers (such as buildings, enclosures or water isolation devices), and relies on mechanical filtration, biological purification, water quality regulation and circulating water treatment technology to achieve internal recycling of the farming water body. Its core features include zero or very low water discharge, high farming density, strong environmental controllability, and through precise feeding, dynamic water quality monitoring and efficient waste recycling technology, it can significantly improve resource utilization, reduce environmental load, and ensure the healthy growth of farmed organisms. It is suitable for factory farming of high value-added varieties, but it requires high technical investment and energy consumption to maintain stable operation of the system.
