Abstracts

Closed cell polyurethane foam is a hard foam, and its hardness depends on the density of the foam. Scope of the Report:

This report focuses on the Closed Cell Polyurethane Foam in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Most of the cells or bubbles in the closed cell polyurethane foam are crammed together in a compact configuration, which make them rigid and strong. These cells are filled with gases, which make them ideal insulators and water resistant. Some of the advantages of closed cell polyurethane foam over open cell polyurethane foam are higher strength and enhanced resistance to air or water vapor leaks. Most of the closed cell polyurethane foams are used for thermal insulation in buildings, pipes, and packaging. The worldwide market for Closed Cell Polyurethane Foam is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
