## Abstracts

Clostridium difficile is one of the most common hospital acquired infections and in the last decade, there has been a notable increase in the incidence of clostridium difficile infection as well as the severity of the infection owing to recurrence and antibiotic resistance. Disproportionately higher incidence is seen in patients undergoing a long-term antibiotic treatment such as in patients with diseases like COPD and urinary tract infection. A rising prevalence of these diseases would subsequently accelerate the growth of the global clostridium difficile infection treatment market.
