According to our (Global Info Research) latest study, the global Cloud AIOps Platform market size was valued at US\$ 2213 million in 2025 and is forecast to a readjusted size of US\$ 5122 million by 2032 with a CAGR of 12.7% during review period.

A Cloud AIOps (Artificial Intelligence for IT Operations) platform is an intelligent operations service built upon a cloud computing architecture; by integrating big data processing, machine learning, and automation technologies, it enables the unified monitoring, analysis, and optimization of infrastructure, application performance, and business metrics within a cloud environment.

The development of cloud AIOps platforms is primarily driven by the increasing complexity of IT system architectures, the widespread adoption of cloud-native and microservices technologies, the explosive growth in operational data volume, and enterprises' ever-rising demands for business continuity and efficient incident response. Traditional manual operations struggle to cope with the massive volume of alerts and the need for rapid fault localization within multi-cloud and hybrid environments; conversely, the maturation of AI and big data technologies has enabled automated anomaly detection, root cause analysis, and intelligent self-healing capabilities. Furthermore, the accelerating pace of digital transformation is compelling enterprises to leverage intelligent solutions to reduce operational costs, enhance resource utilization, and support agile delivery?factors that are collectively driving the accelerated adoption of AIOps platforms across sectors such as finance, telecommunications, the internet, and large-scale manufacturing.
