According to our (Global Info Research) latest study, the global Cloud Application Security Service market size was valued at US\$ 589 million in 2025 and is forecast to a readjusted size of US\$ 896 million by 2032 with a CAGR of 6.2% during review period.

Cloud Application Security Service is a suite of professional services designed to protect the security of applications deployed in cloud environments throughout their entire lifecycle. Its core objective is to ensure the security, compliance, and resilience of cloud-native or cloud-migrated applications at each stage of development, deployment, and operation. This service typically covers security shift left (e.g., integrating SAST/DAST into CI/CD processes), runtime protection (e.g., Web Application Firewall, RASP), API security, microservice and container security, and continuous monitoring and remediation of cloud configuration errors. By integrating automated security tools, expert policy management, and threat intelligence, it helps organizations effectively defend against cloud-specific threats such as data breaches and injection attacks under a shared responsibility model, while meeting industry compliance requirements such as GDPR and HIPAA. It is a key support for achieving 'security as code' and agile development in cloud applications.

The cloud application security service is experiencing rapid but uneven development globally. The North American market is the most mature, driven by stringent compliance requirements and a high degree of cloudification, and is home to numerous comprehensive solution providers. The European market follows closely, with growth strongly driven by data privacy regulations such as GDPR, highlighting the need for data sovereignty and cross-border data transfer protection. The Asia-Pacific region is becoming a growth engine, particularly in China, Singapore, and Australia, where digital

transformation and the rise of local cloud service providers are rapidly generating security demand, but enterprise security maturity varies significantly. Other emerging markets are in the early stages of development, with demand concentrated on basic threat protection and compliance entry-level services. Overall, the global market is evolving from single-point tools to integrated cloud-native application protection platforms, and is increasingly intertwined with the ecosystem of public cloud service providers.
