Abstracts

Cloud computing is being increasingly adopted by educational institutions as it offers flexible and scalable services at nominal costs, such as consumption-based payment models. These exempt educational institutions from investments in outdated hardware and applications and enable them to adapt the latest technologies. In addition, apart from providing numerous client platforms, for both inside and outside educational institutional work, it streamlines processes by standardizing software, offering a shared pool of software applications and services, and providing centralized licensing and updates to the schools. As a result, the lead time involved to develop and implement multifaceted solutions, even without in-house expertise, is significantly less, which improves the learning process cycle.
