The global Cloud-based Database market size is expected to reach \$ 1292830 million by 2032, rising at a market growth of 52.3% CAGR during the forecast period (2026-2032).

A cloud-based database is a database, as the name suggests, resides on a cloud computing platform. Databases are used to store and manage various forms of data generated by a company. Database services can be provided on-premises or on-demand. On-demand services are known as cloud-based databases, which is gaining increasing acceptance among several organizations. A cloud-based database is suitable for organizations that require immediate access to database services, easy scalability options, low cost, and low maintenance. Service providers offer end-to-end solutions, which help organizations focus on their core business areas.

The cloud database solutions have empowered organizations to focus on their core business competencies by relying on the cloud resources completely. Various cloud databases are becoming relevant as they improve the overall efficiency of the client offerings and reduce the support and maintenance considerably, giving almost total control of operations over the data which is stored.

North America is the largest region of Cloud-based Database, with a market share about 35%. It was followed by Europe with 25%. Amazon Web Services, Google, IBM, Microsoft and Oracle are the top 5 manufacturers of industry, and they had about 65% combined market share.
