Abstracts

Database security concerns the use of a broad range of information security controls to protect databases (potentially including the data, the database applications or stored functions, the database systems, the database servers and the associated network links) against compromises of their confidentiality, integrity and availability. It involves various types or categories of controls, such as technical, procedural/administrative and physical. Database security is a specialist topic within the broader realms of computer security, information security and risk management.

Scope of the Report:

This report studies the Cloud-based Database Security market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Cloud-based Database Security market by product type and applications/end industries. According to the Asia-Pacific Economic Cooperation, small and medium enterprises (SMEs) are the engines of growth and innovation in region, and account for over 90% of all enterprises and employ over half of the workforce across Asia-Pacific economies. The growing penetration of the internet and shift toward digitization of the internal processes have been instrumental in driving the adoption of cloud-based services. While enterprises have pushed consistently to meet the challenge of anticipating future demands by adopting cloud-based services, the number of attacks on cloud environments has also increased, which has threatened and challenged the traditional IT infrastructure. The increase in the number of attacks can also be attributed to the fact that more valuable data is shifting to the cloud, and hackers find it lucrative to steal valuable data. Thus, it has become increasingly important for organizations to step up

security systems, to protect their cloud environments.

The global Cloud-based Database Security market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Cloud-based Database Security.

Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
