According to our (Global Info Research) latest study, the global Cloud-Based PACS market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A cloud-based PACS is a Picture Archiving and Communication System running on remote cloud computing services. In this system, third-party healthcare IT professionals are responsible for the system's deployment, support, upgrades, system maintenance, and updates, allowing physicians to focus solely on patient care rather than worrying about IT issues.

Cloud PACS consolidates multiple imaging systems with one flexible, customizable, and low-maintenance platform. Cloud PACS systems are highly scalable, catering to rapidly growing health systems or imaging practices. Designed to be highly flexible, cloud PACS systems enable healthcare providers to view medical images on more devices, including mobile devices. Modern healthcare facilities are making the shift to cloud-based PACS to improve security and scalability and to reduce the burden on IT staff to maintain the imaging system.
