Abstracts

According to our (Global Info Research) latest study, the global Cloud Based Security Services market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Cloud-based security solutions provide a new approach to detecting and mitigating security threats. Agencies deploy a third-party cloud platform in front of their private infrastructure and inline between remote users and their websites and applications. The cloud security provider can examine network traffic for known attack patterns and pass only legitimate traffic through to the application. This allows the solution to stop attacks in the cloud before they reach the target agency’s data center or applications.

Small and midsize businesses (SMBs) are driving growth as they are becoming increasingly aware of security threats. They are also seeing that cloud deployments provide opportunities to reduce costs, especially for powering and cooling hardware-based security equipment and data center floor space.

The Global Info Research report includes an overview of the development of the Cloud Based Security Services industry chain, the market status of Identity Access Management (IAM) System (Internal IT Security Breaches, External Security Breaches), Secure Web Gateway (Internal IT Security Breaches, External Security Breaches), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Cloud Based Security Services.
