The global Cloud Computing Data Center Infrastructure Management Service market size is expected to reach \$ 1209 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032).

Cloud Computing Data Center Infrastructure Management Service (LCMS) is a comprehensive solution for ensuring the stable, efficient, and secure operation of cloud data centers. It provides unified monitoring, automated operation and maintenance, and intelligent scheduling of physical and virtualized resources. The core of this service encompasses compute virtualization, software-defined storage, software-defined networking, and a unified management platform. Its core value lies in transforming distributed physical resources into an elastic computing power pool that can be allocated on demand. By automating processes to replace manual operations, it improves resource utilization and business response speed while ensuring service level agreements are met. It is widely used in private, public, and hybrid cloud environments and is a critical infrastructure for modern enterprise digital transformation.

The global Cloud Computing Data Center Infrastructure Management Service market is steadily growing alongside the deepening of enterprise cloud adoption, the popularization of multi-cloud hybrid architectures, and the evolution of cloud-native technologies. North America and Europe, as mature markets, leverage leading public cloud service provider ecosystems, established managed service providers, and stringent data compliance requirements to hold leading positions in hybrid cloud management platforms, cloud cost optimization, and cloud-native operations and maintenance services. The Asia-Pacific region is the fastest-growing and most innovative sector, with China and Southeast Asian countries driven by accelerated

enterprise digital transformation, the booming internet economy, and the wave of domestic substitution, leading to the rapid popularization of multi-cloud management, automated operations and maintenance, and security compliance services, and the rapid rise of local service providers. The Middle East and Africa focus on digital infrastructure construction and supporting services for public cloud deployment. The industry as a whole is accelerating its evolution towards intelligent operations and maintenance, FinOps-based refined cost management, and unified multi-cloud scheduling.
