## Abstracts

According to our (Global Info Research) latest study, the global Cloud Data Migration market size was valued at US\$ 468 million in 2025 and is forecast to a readjusted size of US\$ 727 million by 2032 with a CAGR of 6.4% during review period.

Cloud data migration refers to the process of securely, efficiently, and completely transferring and importing data from on-premises data centers, private clouds, or other public cloud environments to a target cloud platform. It involves not only the batch transfer of large-scale data (cold data) but also the real-time synchronization and switching of online business data (hot data). This process typically encompasses multiple stages, including assessment and planning, data discovery, migration implementation, verification and check-in, and switchover, while ensuring business continuity, data consistency, and integrity during the migration. The core challenges lie in handling heterogeneous environments, ensuring security and compliance, minimizing business interruption, and optimizing costs and speed. Cloud data migration is a crucial foundational step for enterprise digital transformation and the implementation of cloud strategies.

Cloud data migration prices vary significantly globally, ranging from approximately \$50,000 to \$200,000 for small to medium-sized projects, while large and complex migration projects often exceed \$1 million. The cost structure is primarily driven by the investment in high-end technical consultants and engineers, accounting for over 60% of the total cost, with the remainder consisting of migration tool licenses and temporary cloud resource consumption. This service falls under the category of professional services, with gross margins typically between 30% and 50%, significantly lower than standardized software products. The upstream of the industry chain consists of cloud

infrastructure providers, professional tool vendors (Informatica, NetApp), and network acceleration service providers (Aryaka). Downstream customers are widely distributed across all industries undergoing cloud transformation, including finance (such as Citibank), retail (such as Walmart), and manufacturing (such as General Electric), whose core need is to achieve secure, smooth, and compliant migration and modernization of business systems.
