Cloud disaster recovery is a service model in which disaster recovery is regarded as a service and the customer pays to use the disaster recovery service provider to provide disaster recovery.

Cloud disaster recovery services use the most advanced, safe, and reliable data backup and data replication technologies to build manageable and operable disaster recovery services, and provide different levels of intra-city or remote disaster recovery services for enterprises, institutions, and government departments. This ensures that customers' business data and key application systems can be quickly and accurately restored after a disaster occurs, ensuring the continuous operation of customers' businesses.
