Cloud computing is the use of computing resources that are delivered to customers with the help of Internet. The evolution of cloud computing has led to the emergence of cloud-enabling technologies such as virtualization, automated computing, and service-oriented architecture (SOA) technologies. Cloud computing enables enterprises to use these technologies without having a deep understanding or expertise of how they function. Virtualization refers to the technique of creating a virtual version of the physical infrastructure and is the most popular among cloud-enabling technologies. It reduces IT costs and improves the agility of the business. After the emergence of cloud-enabling technologies, IT operations are being automated, and resources are being supplied on demand. SOA refers to a collection of services that can be integrated and offered as cloud-based solutions to enterprises. Advances in these technologies have led to the increased adoption of cloud-based services worldwide.

SCOPE OF THE REPORT:

This report studies the Cloud-enabling Technologies market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Cloud-enabling Technologies market by product type and applications/end industries. According to the report, one driver in market is growing adoption of cloud-based services. There is a trend among enterprises to adopt cloud-based services for at least one of the operational needs of their businesses. Cloud computing uses cloud-enabling technologies to simplify cloud operations for end-users. Increased adoption of these services by enterprises will lead to innovations in technologies that will make the cloud environment more efficient. Many vendors are focusing on improving their products to

enhance cloud capabilities and remain competitive in the market. Virtualization offers a simplified platform to optimize IT resources by making them more scalable, which indirectly decreases the cost of adopting cloud technology.
