According to our (Global Info Research) latest study, the global Cloud Firewalls market size was valued at USD 2274 million in 2023 and is forecast to a readjusted size of USD 6580.9 million by 2030 with a CAGR of 16.4% during review period.

Cloud Firewalls are software-based, cloud deployed network devices, built to stop or mitigate unwanted access to private networks. As a new technology, they are designed for modern business needs, and sit within online application environments.

The rise in malware and phishing threats among enterprises and the increase in adoption of IoT and BYOD trends are boosting the growth of the firewall as a service market. In addition, a surge in demand for the cloud-based firewall as a service model positively impacts the growth of the market. On the contrary, the increase in adoption of mobile device applications and platforms, and need for strong authentication methods, and transformation in the traditional network management solutions industry are expected to offer remunerative opportunities for the expansion of the firewall as a service market during the forecast period.
