Cloud GIS is the combination of running GIS software and services on cloud infrastructure and accessing GIS capabilities using the web. In addition, Cloud GIS could be defined as a next generation on-demand GIS technology that uses a virtualized platform or infrastructure in a scalable elastic environment.

SCOPE OF THE REPORT:

This report studies the Cloud GIS market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Cloud GIS market by product type and applications/end industries.

The implementation of cloud computing technology has been a major milestone in the GIS industry. The advantages associated with the adoption of cloud GIS, such as optimized operations in real time, are encouraging organizations to shift to this technology. Cloud GIS use a virtualized platform, which is beneficial for a scalable, elastic environment.

The rise of Cloud Computing is making notable change in various areas of information technology. GIS technology users are one of the first customers to explore the cloud-based applications and its benefits. Users take the advantage of sharing spatial data and applications using the cloud. Therefore massive spatial data storages fit into cloud instead of transferring the data via the network.

The global Cloud GIS market is valued at 660 million USD in 2017 and is expected to reach 1440 million USD by the end of 2023, growing at a CAGR of 16.9% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
