Abstracts

Cloud GPU platform is a type of cloud computing infrastructure designed to grant users access to Graphics Processing Units (GPUs) via the internet. By leveraging these platforms, users can effectively rent GPU resources on a pay-as-you-go basis, thereby alleviating the necessity for organizations to procure and uphold physical GPU hardware. This model offers significant advantages, including enhanced scalability, accessibility, and cost-effectiveness. Users can seamlessly adjust GPU resources to accommodate fluctuating computational demands, harness powerful computing capabilities remotely from any location with internet connectivity, and avoid upfront capital expenditures by paying only for the resources they utilize. Additionally, cloud GPU platforms typically feature cutting-edge GPU hardware optimized for parallel processing, ensuring superior performance for tasks such as machine learning, data analytics, and scientific simulations.

According to our (Global Info Research) latest study, the global Cloud GPU Platform market size was valued at US$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
