Abstracts

Cloud GPU platform is a type of cloud computing infrastructure designed to grant users access to Graphics Processing Units (GPUs) via the internet. By leveraging these platforms, users can effectively rent GPU resources on a pay-as-you-go basis, thereby alleviating the necessity for organizations to procure and uphold physical GPU hardware. This model offers significant advantages, including enhanced scalability, accessibility, and cost-effectiveness. Users can seamlessly adjust GPU resources to accommodate fluctuating computational demands, harness powerful computing capabilities remotely from any location with internet connectivity, and avoid upfront capital expenditures by paying only for the resources they utilize. Additionally, cloud GPU platforms typically feature cutting-edge GPU hardware optimized for parallel processing, ensuring superior performance for tasks such as machine learning, data analytics, and scientific simulations.
