Abstracts

IDS (Intrusion Detection System) and IPS (Intrusion Prevention System) both increase the security level of networks, monitoring traffic and inspecting and scanning packets for suspicious data. Detection in both systems is mainly based on signatures already detected and recognized.

Scope of the Report

This report studies the Cloud IDS IPS market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Cloud IDS IPS market by product type and applications/end industries.

By solution type, the cloud IDS IPS market has been segmented into signature-based detection, anomaly-based detection, and other types. Signature-based detection involves the use of already defined patterns to scan for packet sequences that are known to be malicious. Signatures are easy to develop and understand owing to which they are widely used for intrusion prevention. Moreover, due to the availability of high computing power, pattern matching is more efficient and can be performed at a fast rate. These benefits provided by signature-based type are expected to further drive the growth of the cloud IDS IPS market during the forecast period.

By services, the cloud IDS IPS market is segmented into training and consulting, integration, and support and maintenance. The support and maintenance segment is expected to grow at the highest CAGR during the forecast period. Maintenance services facilitate upgrades to existing systems and provide assistance for solving issues of products. As the deployment of anomaly detection solutions is increasing, the demand for support and maintenance services is also gaining traction.

The global cloud IDS IPS market by region is segmented into North America, Asia Pacific (APAC), Europe, Middle East and Africa (MEA), and Latin America. North

America is estimated to hold the largest market size in 2017, owing to the presence of a large number of vendors and rapid adoption of cloud-based solutions in this region. The market in APAC is expected to grow at the highest CAGR during the forecast period. The primary driving forces for this growth are the increasing awareness and adoption of cost-effective and scalable cloud-based solutions in this region. The global Cloud IDS IPS market is valued at 550 million USD in 2017 and is expected to reach 2010 million USD by the end of 2023, growing at a CAGR of 24.0% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Cloud IDS IPS.

Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
