Abstracts

Cloud Infrastructure refers to online services that provide high-level APIs used to dereference various low-level details of underlying network infrastructure like physical computing resources, location, data partitioning, scaling, security, backup etc. A hypervisor, such as Xen, Oracle VirtualBox, Oracle VM, KVM, VMware ESX/ESXi, or Hyper-V, LXD, runs the virtual machines as guests. Pools of hypervisors within the cloud operational system can support large numbers of virtual machines and the ability to scale services up and down according to customers' varying requirements.

Scope of the Report

This report focuses on the Cloud Infrastructure in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Several healthcare organizations are progressively automating their IT infrastructure to unify the complex IT infrastructures by combining storage, applications, network, and data. Having their IT infrastructure automated, it simplifies healthcare organizations' patient care and facility management data, which help to optimize the flow of information between the facilities' equipment, medical systems, and applications. The automation of healthcare organizations' IT infrastructure can help in simplify command and control through their own protocol and reduce the facilities' overall cost of operation.

Currently, most organizations are investing heavily in developing software and applications that are deployed on-premises. By embracing the cloud services, the storage infrastructure and equipment costs within the organizations are getting optimized due to the faster deployment capabilities, along with business activities and productivity at employees' end. This fact is increasing the adoption trends of

infrastructure as a service (IaaS) and platform as a service (PaaS) in various industries, thereby driving the growth of the market for cloud services.

The worldwide market for Cloud Infrastructure is expected to grow at a CAGR of roughly 12.9% over the next five years, will reach 312800 million US\$ in 2023, from 151000 million US\$ in 2017, according to a new GIR (Global Info Research) study.
