The global Cloud Infrastructure Services Software market size is expected to reach \$ 19964 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Cloud infrastructure service software is the core system software used to manage the underlying resources of cloud computing. It includes functions such as computing resource scheduling, storage management, virtualization control, network configuration, and security policy management, and is a key technological foundation for building IaaS and hybrid cloud architectures. This type of software achieves elastic resource allocation and unified scheduling through automation and virtualization technologies, supporting the high availability and scalability of enterprise IT systems, and is the core infrastructure for the operation of modern digital enterprises.

With the increasing adoption of cloud computing and multi-cloud architectures, the complexity of cloud infrastructure management has significantly increased, driving rapid growth in demand for related software. Simultaneously, the explosive growth in AI computing power has led to an upgrade in cloud resource scheduling from traditional computing to GPU and AI cluster optimization. In the future, this field will develop towards intelligent scheduling, edge cloud collaboration, and autonomous operation and maintenance (AIOps), maintaining a strong growth trend driven by digital transformation and the AI industry.
