Abstracts

The increasing number of cyber-attacks has prompted companies to increase spending on IT infrastructure to prevent data theft and data leakage. To prevent data modification or unauthorized access, an intrusion prevention system IDS has been developed to identify malicious activities on the network and intrusion prevention systems (IPS). An intrusion detection system is a passive surveillance system that alerts the system administrator of any suspicious activity, while an intrusion detection system allows the administrator to take appropriate action against the alerts generated by the intrusion detection system.
