Abstracts

According to our (Global Info Research) latest study, the global Cloud Library market size was valued at US\$ 486 million in 2025 and is forecast to a readjusted size of US\$ 741 million by 2032 with a CAGR of 6.1% during review period.

Cloud library can be defined as a virtual library built on the Internet and providing services to readers. It is based on cloud computing technology and concepts to build safe, efficient, stable and economical library infrastructure and services for various libraries, and provide users with efficient, low-cost and highly available personalized library cloud services. The technical architecture of the cloud library platform usually includes multiple layers, such as the infrastructure layer (IaaS), the system service layer (PaaS) and the application service layer (SaaS). These layers work together to provide cloud libraries with strong underlying technical support and rich functional services. Its core features include cloud-based resource storage, multi-terminal synchronization, social interaction, and LBS location services (such as borrowing physical books from nearby locations). A typical application is the 'cloud library,' where users upload their personal book collections by scanning barcodes, building a shared book network. The industry's gross profit margin is approximately 30-45%.

Market drivers mainly include:

Policy support and the promotion of cultural digitalization strategies: The national '14th Five-Year Plan' explicitly proposes 'building a smart library system,' promoting the free opening of public libraries and the popularization of the branch library system, providing infrastructure support for mobile cloud libraries; strengthened copyright protection (such as continuing the VAT exemption policy for book wholesale and retail) promotes the aggregation of genuine resources and enhances the platform's content

competitiveness.

Upgraded user needs and diversified scenarios: The growing demand from individual users for 'fragmented reading + deep learning' is driving the platform's transformation from simple borrowing to 'resources + community + services' (such as book clubs and expert lectures); enterprises and schools need to use mobile libraries for employee training and student self-study management, creating demand for customized solutions; the public cultural sector is using LBS technology to build '15-minute reading circles,' solving the problem of resource access in remote areas.

Technological integration and business model innovation: 5G and AI technologies reduce content transmission latency and improve recommendation accuracy (such as personalized push based on reading habits); blockchain technology ensures the security of borrowed data and enhances user trust; the platform achieves diversified profitability through 'free basic services + value-added paid content' (such as exclusive courses and advanced data analysis), attracts capital investment, and accelerates industry iteration.
