## Abstracts

OpenStack controls functionalities within compute, storage, and networking resources through a data center. It is managed through web dashboards or API. The technology is suitable for hybrid infrastructure as it reduces the risk of lock-ins that are associated with proprietary platforms. OpenStack is becoming a strategic choice for many organizations and service providers that offer cloud-computing services on standard hardware. It is also ideal for companies deploying private clouds and large enterprises using cloud solutions across multiple continents.

### SCOPE OF THE REPORT:

This report studies the Cloud Management for the OpenStack market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Cloud Management for the OpenStack market by product type and applications/end industries. According to the report, one of the key drivers for market growth will be easy infrastructure management requirement. The ability of OpenStack to allow the addition of new components by end-user requirement addresses the growing demand among enterprises for storage, computing, and space optimization. As new components can be added quickly because of its open nature, other existing cloud components can also run on OpenStack, thereby enhancing interoperability and integration. In addition, OpenStack infrastructure is evolving to provide the necessary tools for developers. Therefore, owing to its ease of management, we expect more numbers of enterprises should adopt the technology.
