Abstracts

Cloud printing is the technology that enables printers to be accessed over a network through cloud computing. There are, in essence, two kinds of cloud printing. On the one hand, consumer-based cloud printing connects any application to cloud-enabled home printers that people own or have access to. Using this technology, people can take digital media as their primary communications tool and create a printed page only when they need the content in a physical form.
On the other hand, professional cloud printing enables publishers, companies and content owners to print their digital publications by leveraging networks of production facilities through cloud computing technology. In short, professional cloud printing allows for the 'ad-hoc transformation of digital information into physical forms in 2D or 3D.'
