Abstracts

C-RAN (Cloud-RAN), sometimes referred to as Centralized-RAN, is a proposed architecture for future cellular networks. It was first introduced by China Mobile Research Institute in April 2010 in Beijing, China, 9 years after it was disclosed in patent applications filed by U.S. companies. Simply speaking, C-RAN is a centralized, cloud computing-based architecture for radio access networks that supports 2G, 3G, 4G and future wireless communication standards. Its name comes from the four 'C's in the main characteristics of C-RAN system, "Clean, Centralized processing, Collaborative radio, and a real-time Cloud Radio Access Network".
Scope of the Report

This report studies the Cloud Radio Access Network (C-RAN) market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Cloud Radio Access Network (C-RAN) market by product type and applications/end industries.
Targeted outdoor urban areas mainly comprise urban locations, which have large numbers of users. Such locations include crowded streets, traffic signals, and areas with a large number of residential or commercial buildings. In order to enhance the existing infrastructure (transforming from Long Term Evolution (LTE) to 5G) by reducing the CAPEX, the deployment of the centralization technology is a major step taken by telecom operators.
North America has the most competitive and rapidly changing C-RAN market in the world. North America, among all the regions, has shown the maximum adoption of C-RAN solutions. Being one of the most technologically advanced regions in the world, North America is connected with complex networks across all industries in different verticals. The US and Canada are expected to extensively implement C-RAN solutions;
