A radio access network (abbreviation: RAN) is a part of a mobile communication system. It is the realization of radio access technology. It exists between a device (for example, a mobile phone, a computer, or any remotely controlled machine) and a Core Network (CN), and provides a communication connection between the two.

Scope of the Report:

This report studies the Cloud-RAN market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Cloud-RAN market by product type and applications/end industries.

First of all, Cloud-RAN offers various benefits like reduction in cost of network operations. The three types of cost reductions are energy consumption, site rental expenses and operational & maintenance cost of network. These savings can be balanced against cost incurred on fibre optical cables required to meet fronthaul capacity and latency requirements. Cloud-RAN also enhances capacity due to coordinated multipoint and ensures speedy performance. Aforementioned benefits of Cloud-RAN architecture automatically increase the value of service to end-users. Second,the global Cloud-RAN market can be divided into different regions. Emerging economies of Asia Pacific will generate significant demand in the following year.

The global Cloud-RAN market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
