Abstracts

According to our (Global Info Research) latest study, the global Cloud Video Streaming market size was valued at US\$ 8974 million in 2025 and is forecast to a readjusted size of US\$ 13761 million by 2032 with a CAGR of 6.5% during review period.

Cloud video streaming is a video streaming service based on cloud computing technology. By migrating video content storage, processing, and distribution to the cloud, users can access cloud video resources in real time via the internet. Its core features include multi-network compatibility (supporting 5G/Wi-Fi/4G, etc.), unlimited terminal compatibility (compatible with PCs, mobile phones, VR devices, etc.), and content transparency (users do not need to worry about storage and processing details). It achieves low-latency, high-smoothness video transmission through technologies such as cloud transcoding and CDN acceleration. The industry's gross profit margin can reach 45%-65%.

Market drivers mainly include the following:

Technological iteration drives experience upgrades: The widespread adoption of 5G networks and the integration of AI technology significantly improve the clarity (e.g., 8K ultra-high definition), smoothness (as low as 100ms latency), and interactivity (e.g., real-time voice recognition, gesture control) of video streams. For example, Volcano Engine, through the integration of multimodal large models and RTC services, achieves emotional preservation and rapid response in AI audio and video dialogues, redefining the human-computer interaction paradigm.

Diversified Scenarios Expand Market Boundaries:

Enterprise Side: The normalization of remote work is driving video conferencing to evolve from an auxiliary tool into a core collaboration platform, supporting online meetings of tens of thousands of people and intelligent meeting assistants (such as automatically generating meeting minutes);

Consumer Side: The explosive growth of scenarios such as short videos, live-streaming e-commerce, and cloud gaming is creating demand for high-concurrency, low-latency streaming media services;

Industry Side: Fields such as healthcare (remote surgical guidance), education (virtual laboratories), and industry (remote equipment maintenance) are accelerating the implementation of video streaming technology, forming vertical solutions of 'video + industry'.

Dual Support from Policy and Capital: The national 'New Infrastructure' strategy lists cloud computing, 5G, and AI as key development directions, providing policy support for video streaming infrastructure; at the same time, capital continues to flow into leading companies (such as Tencent Cloud and Alibaba Cloud), driving investment in technology research and development and ecosystem building.
