A cluster evaporation machine is an advanced vacuum coating device with a modular, clustered design, used for depositing high-precision thin films on substrates. Its core features include integrated multiple evaporation sources and precise alignment systems, supporting co-evaporation of multiple materials (e.g., perovskites). It achieves uniform heating and coating through rotating and temperature-controlled substrates. Typically equipped with automated control programs, it allows flexible adjustment of process parameters. The machine is suitable for thin film preparation in fields like photovoltaics, semiconductors, and display panels, offering high efficiency, uniformity, and process versatility.
