A clustered RF coaxial connector is a connector used for RF signal transmission. It can connect multiple coaxial cables together in a clustered manner and is usually used in multi-channel or high-density RF systems. The connector achieves synchronous transmission of multiple signals through a clustered design, while maintaining low insertion loss and good signal integrity. Clustered RF coaxial connectors are widely used in communications, aerospace, military and other fields that require high-frequency signal transmission. Its design can reduce the number of connectors, save space, and improve system integration while ensuring signal quality.
