The global Clutch Steel Plate market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The clutch steel plate is a part used in the synchronizer in the automobile gearbox, which can realize the smooth switching between different gears and improve the power and fuel economy of the car. The structure of the clutch plate is generally composed of a ring-shaped main body and a group of teeth evenly distributed along the periphery. Its working principle is to change the transmission ratio and steering by meshing with gears on different shafts. There are many ways to process clutch steel plate, such as forging, precision forging, cutting, welding, etc. The material is generally cast steel or cast iron, and its surface is treated with anti-corrosion to adapt to different working environments.

This report studies the global Clutch Steel Plate production, demand, key manufacturers, and key regions.
