## Abstracts

According to our (Global Info Research) latest study, the global CLYC:Ce Crystal market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

CLYC:Ce Crystal is a dual mode gamma-neutron detection scintillation crystal systems for nuclear imaging applications. It is the first practical gamma-neutron scintillation detector for use as a replacement for both medium resolution gamma-ray detectors and Helium-3 proportional counter tubes for neutron detection. The ease of using Pulse Shape Discrimination (PSD) for neutron detection, combined with better gamma-ray resolution than NaI or CsI, make the CLYC:Ce detector an ideal solution for several classes of handheld instruments, including personal radiation detectors (PRDs), spectroscopic personal radiation detectors (SPRDs), and radioisotope identification devices (RIDs). Other applications requiring gamma-neutron detection can also benefit from using CLYC:Ce.
