CMOS Radar Transceiver is a highly integrated millimeter-wave device built on CMOS technology to generate, transmit, and receive radar signals with high linearity, low phase noise, and stable output power, supporting compact and cost-efficient sensing performance for automotive radar and industrial radar. In 2025, production was approximately 22.5 million units and the average price was USD 12 per unit. The industry's capacity utilization rate in 2025 was about 51% and the average gross margin was around 55%. Upstream, the most critical inputs include silicon wafers, photoresists, lithography machines, and etching tools, with representative suppliers such as ASML, Tokyo Electron, and Applied Materials providing essential semiconductor materials and equipment. The midstream segment covers system architecture design, analog front-end development, RF and baseband integration, digital signal processing, mixed-signal verification, and tape-out management, which collectively determine performance and integration level. Downstream, CMOS Radar Transceiver is used by automotive radar and industrial radar manufacturers such as Bosch, Continental, Aptiv, Valeo, Denso, ZF, and Huawei.
