Abstracts

According to our (Global Info Research) latest study, the global CMP Composite Polishing Pads market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The composite polishing pad has a 'hard top and soft bottom' composite structure, which takes into account both flatness and non-uniformity requirements. The composite polishing pad contains a double microporous structure, which significantly reduces the rebound rate of the current polishing pad, reduces the depression of the pad and improves uniformity, solving the problem of easy glazing during the use of the pad.
