## Abstracts

According to our (Global Info Research) latest study, the global CMP Membranes market size was valued at USD 197.9 million in 2023 and is forecast to a readjusted size of USD 329.4 million by 2030 with a CAGR of 7.6% during review period.

CMP Membrane is a key part attached on the back of semiconductor wafer inside CMP (Chemical mechanical polishing) device to absorb semiconductor wafer in the semiconductor wafer polishing process. As membrane contacts semiconductor wafer directly, it has no surface scratch, foreign substance, bubble and other defect at all. For its direct relationship with polishing, membrane thickness should be maintained constantly within  $\pm 0.1$ mm difference.

Membrane types are differentiated according to each CMP equipment head and produced in two different sizes of 200mm and 300mm. The 300mm size is used mostly in line with semiconductor development towards high-integration and yield enhancement. The 200mm size is produced with two materials of EPDM and silicon. The 300mm is made of the silicon material.

Global 5 largest manufacturers of CMP Membranes are Applied Materials, Inc. (AMAT), EBARA, MOS, IV Technologies Co.,Ltd and Warde Tec, which make up over 90%. Among them, Applied Materials is the leader with about 60% market share.

China is the largest market, with a share over 45%, followed by South Korea and North America, with the share about 22% and 14%. In terms of product type, 5-zone, 6-zone and 7-zone occupies the largest share of the total market, more than 80%. In terms of product application, 300mm Membranes occupy the largest share of the total market,

about 90%.
