According to our (Global Info Research) latest study, the global CMP Polymer Polishing Pads market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

CMP polymer polishing pads are made up of foam-cured polyurethane and are an important part of the chemical-mechanical polishing system, having the function of storing the polishing solution and transporting it evenly throughout the processing area of the workpiece. However, polyurethane polishing pads are too hard and can easily scratch the chip surface during processing. For rough polishing, foam-cured polyurethane polishing pads are used.
